"Wood... taken one step further"

Thinking one step further – You can learn what this motto means to us on the following pages. In doing so, we will focus on three locations. Get inspired by the stories, photos and videos as well as the people behind them.

megawood® barefootboards are exclusively manufactured in Germany. Our products are globally unique. They consist of up to 75% natural fibres from the wood planing and sawmill industries and originate from sustainably managed timber stocks. We refine them with 25% polymers and additives.

Wood is good and we make it even better. We utilise the positive attributes and supplement them with further advantages. megawood® can be recycled and can be returned to the production process. The raw material of today is also the raw material of tomorrow. This is our contribution for the benefit our children and grandchildren.

Dipl.-Ing. Holger Sasse
Managing Director

You can find more information regarding the philosophy of megawood® via the adjacent QR code or at www.megawood.com/101

Trust – Made in Germany

"Chips are created wherever wood planing takes place" – and this is great news!

Sawmill and wood planing chips: They are our basis for the raw material of tomorrow. At our Company Headquarters in the central German town of Aschersleben, we further develop and process them into an innovative wood-polymer material. Over 125 employees working for our company group have manufactured over **6 million square metres** of decking floorboards **since 2005**. This volume of assembled surfaces is our guarantee to you. We are the European market leader and we want to keep it this way. Therefore, we have patented our knowledge.

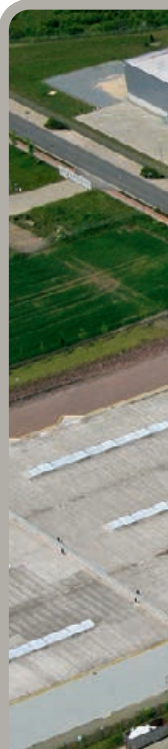

The name: **megawood®**. It combines wood as a natural product with an innovative polymer technology to create a unique environmentally-friendly and recyclable natural material which is the basis for our products. The **solid structure** of our floorboards guarantees durability and dimensional stability. This is the decisive difference compared to hollow section products! Furthermore, we comply with all applicable standards and the legal warranty requirements.

Child safety included

We rely on nature: Our wood material consisting of up to 75% of natural fibres is **free from softeners and PVC**. This makes a great impression: We have already obtained official approval for the manufacture of toys.

Practice makes perfect

We regularly offer training courses for tradespeople, dealers, and assembly facilities at our Lindenhof Training Centre. Consequently, our certified megawood® partners are always up-to-date in terms of technology. Together with the VHI (German Association of the Wood-Based Materials Industry), we are committed to sustainable construction using wood polymer materials at the "Institut Bauen und Umwelt" (German Construction and Environment Institute).

The advantages are obvious

You can find more good reasons as well as answers from megawood® via the adjacent QR code or at www.megawood.com/102

Good reasons for a megawood® deck

The best of both worlds

megawood® barefootboards combine the positive attributes of wood with knowledge from the field of modern polymer research. What is the result? A natural surface: From a textured profile to a colour effect signed by nature, megawood® barefootboards are **more resistant than wood** and are extremely durable. They can be processed just as easily as wood and create a **unique barefoot feeling**. The visual appearance, feel, and smell of wood as a

natural material remain intact but the laborious maintenance such as regular oiling or painting is no longer required. The deckboards do not even become grey like wood, even when exposed to UV rays. And all of this is achieved without a single plastic layer.

We only manufacture solid barefootboards from megawood® products – we do not manufacture susceptible hollow section floorboards. This keeps insects and penetrating water at bay. Our products comply with the highest health and safety requirements. As **no dangerous splinters** are to be found in our material, it is particularly suitable for barefoot use. In conjunction with Fix Step, our in-house sub-construction system, we offer a complete terrace system that is supplemented by the megalite LED light system and the megawood® privacy shield.

- **Solid Deck Boards**
no hollow sections
- **Surface hardness**
extremely resistant to scratches
- **Slip-resistant**
even in the event of wet surfaces
- **Brushed surface**
no plastic skin
- **Our own sub-construction**
simple to handle and quick to lay
- **Colour fast**
no greying as with wood
- **Durable**
no coating required to make it last
- **Unique surfaces**
naturally textured

In harmony with nature

"High-tech for extreme weather conditions"

Daniel and Ines Schwegler have realised a dream by converting their mountain guesthouse in the Allgäu Alps. What was particularly important to the hostess of the Gentian hut when selecting the terrace material?

"The weather conditions are extremely rough for months on end here, at a height of 1,800 m and these conditions usually strain all materials", says Ines Schwegler with a sly smile on her face. But not megawood®. "Despite **extreme weather conditions** that continued through into May in some instances, our terrace still looks the same as it did shortly after our inauguration celebration." The large megawood®

CLASSIC terrace laid in 2012 has proven itself despite a permanent fluctuation between rain and sunshine as well as 35,000 hikers that have stopped at the hut in the meantime.

The Gentian hut is passed on from generation to generation. The Schwegler Family thinks in large time dimensions.

"Nature is the most valuable commodity that we must protect on behalf of our grandchildren", says Ines Schwegler. Therefore, the fact that no tree was cut down for megawood® particularly pleases her – also because of and, in fact, especially because of the unspoiled nature that her guests can enjoy from her terrace with a clear conscience.

There is so much more potential in megawood®. The comfortable terrace is only the beginning.

Once megawood® – forever megawood®? The answer is obvious to Ines Schwegler. "The material is so robust and diverse that I would love to buy megawood® blinds, balcony rails or furniture – immediately if I could!" This is because the constant maintenance and replacement of the pure wood elements at the mountain guesthouse take up a lot of time. Time that she would rather give to her guests that brave the climb to the hut each year. **The safety and comfort** of the hikers is Ines Schwegler's priority. "There is simply nothing better than a relaxing barefoot feeling following a demanding day of hiking, right?"

"Family fun on the new terrace!"

Tino Früchtl – a family father is convinced that “I know what it involves!”.

Tino Früchtl, and a megawood® employee since 2009, fulfilled his desire for a megawood® deck during this year’s terrace season. As a long-standing co-creator of the material, he has a precise knowledge of the percentage of raw materials that go into the boards. “megawood® is produced using modern methods and has to pass extreme laboratory tests on a regular basis – this means that the demands I place on the new terrace are more than exceeded. I can confirm this at first hand“, says

Früchtl. Two aspects were especially important to the family father: the naturalness and the safety of the material. megawood® boards have a very near-natural surface and feel like wood. They do not however have any dangerous splinters, are colour-resistant and even non-slip when they are wet. The material is even approved for the manufacturing of toys – “It is therefore absolutely safe for our two children and for the four-legged family members“.

After the Früchtl family had converted and designed the house and garden themselves, the decision to also plan and lay the new terrace themselves was quickly made. “The planning with the terrace planner was much easier than we thought“. Seeing how the terrace would look in our garden in a virtual form in advance, was great fun“, says Linda Früchtl a bit proud. “It was also easy to construct with the assistance of the planner and the construction plan. I had even more fun with the decorating of the new terrace“, she says and returns to her family who are sitting on their new megawood® family terrace with friends on a mild summer’s evening for a cozy barbecue.

"Enjoy special moments outdoors"

Innovation means to fully focus on progress. For Armin Junghanns, Head of Application Engineering at megawood®, this is his mission in life.

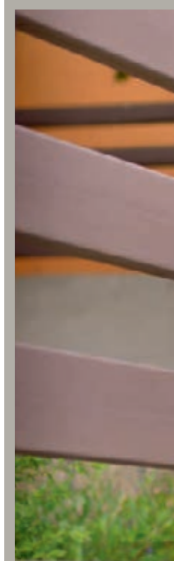

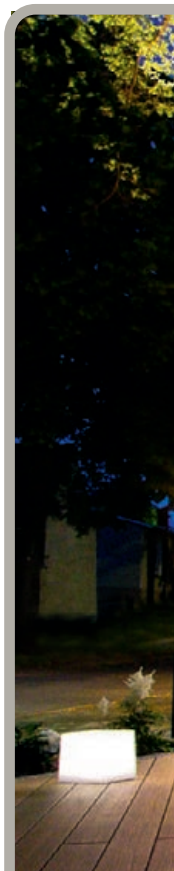

He enthusiastically shows us around the rooms of the Lindenhof in Aschersleben. He constantly points out many objects that have already been manufactured from megawood® as single pieces or in small production runs. "The opportunities are almost limitless. The material combines the **naturalness of wood** with the resistance and flexibility of polymers", says Mr Junghanns. The furniture at Lindenhof, which doubles up as an inspiring training centre for stockists and installers, also proves that a board does not always have to be square. Anything goes. Lindenhof provides a **window to the near future** – Armin Junghanns collects it and further develops it. His ideas are subjected to the acid test of everyday life at Lindenhof. "A product will only be available for you to enjoy at home once we are 100% satisfied with it." He also promises this in terms of the ecological aspect of the material and adds "**no tree will be cut down for us!**"

Home comfort

In addition to the raised garden beds, facades and fences, it goes without saying that Lindenhof also boasts the most diverse of barefootboards. The **SIGNUM** deck is a real eye catcher. The residents of the small village like sitting there on the megawood® benches in order to enjoy the evening Sun. "The surface structure of the floorboards really come into its own thanks to the alternating light and shade", explains Armin Junghanns who is already looking forward to a cosy family evening on his megawood® deck.

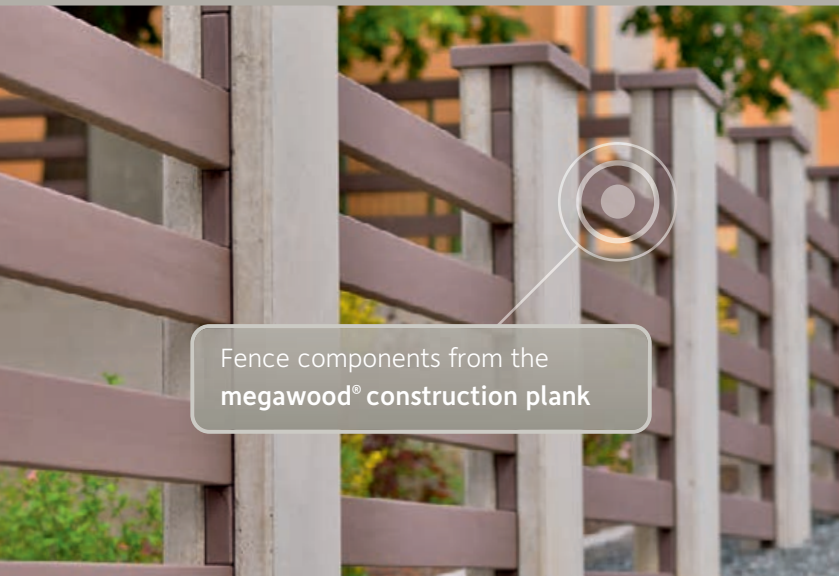

You can find innovative applications via the adjacent QR code or at www.megawood.com/106

Fence components from the megawood® construction plank

Armin Junghanns
Head of Application Engineering

"Deck construction with expertise"

"I can install that with a clear conscience."

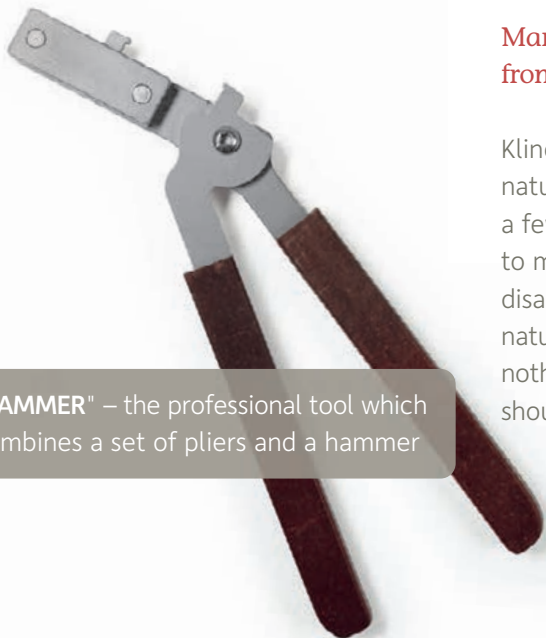

This sentence is always uttered whenever master craftsman Thomas O. Kling speaks to his customers about the solid megawood® deck boards that are consistently manufactured from unpainted wood-polymer material. "The boards retain their shape, they don't bend as water cannot penetrate solid floorboards and cause frost damage as can happen on hollow section floorboards." For some years now, TOK from Munich has utilised megawood® – the only material on the market with a wood content above 70%. **"That is exactly what my customers want.** No imported floorboards that are coated in plastic." megawood® is a real wood product manufactured from **certified, sustainable forests** that, thanks to its brushing, also visually **emphasises the natural character** and is also **robust**. "Ultimately, the deck should continue to look great for years to come."

A complete decking system

Whether a party zone or a quiet area: "Enjoying your own deck can happen particularly quickly if the substructure is suitable", says Mr Kling. He is referring to the **sophisticated FIX STEP construction system**. "The boards can be quickly laid: simply adjust the height, click the beam in and then lock the boards in place with the **'Zammer'** so that they are invisible." As an experienced craftsman, he is able to quickly lay decks in this way and almost without the need for any screws.

Manufactured internally and externally from megawood® – completely homogeneous

Kling believes that the development of the surfaces is a natural process that even "digests" red wine stains after a few weeks of sunlight. "I am happy to make this promise to my customers." With megawood®, most traces of use disappear after a few weeks by themselves thanks to natural processes. "Wood simply isn't plastic! In nature, nothing remains as it is. Nature is alive and this is how it should be."

"ZAMMER" – the professional tool which combines a set of pliers and a hammer

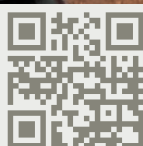

made in Germany

megawood

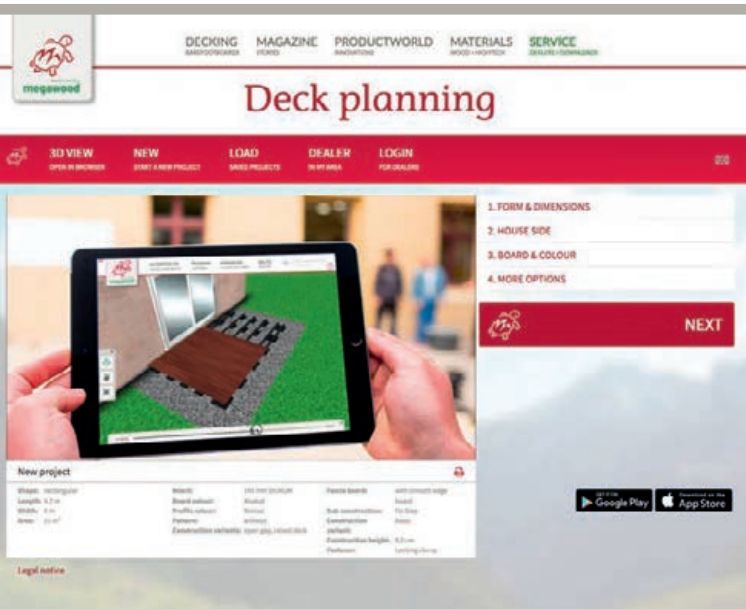

"It's fun to install a sophisticated system."

Master craftsman
Thomas O. Kling

1 The playground prior to construction of the new SIGNUM deck.

2 Digital planning of the deck in front of the Luisenschule using the megaplanner^{3d}.

3 Completed SIGNUM deck at the Luisenschule.

You can find the deck planner and the download link for the megawood® 3D-App via this QR code or at: www.megawood.com/108

Deck planning via tablet & PC

megaplanner^{3d} online

Anyone who prefers to plan using their computer instead of pencil and paper should take a look at our online **megaplanner**. Digital is simply better and, above all, easier! The planner accurately masters all megawood® construction rules and generates a **3D view** of the planned deck down to the last millimetre. Each one of your projects receives an individual **planning number** which you can use to obtain a tailored quote from your dealer in person. You can also easily locate your dealer as we have equipped our **megaplanner** with a fairly clever **dealer search** option complete with contact details.

Virtual reality

When using the unique **megawood® App** for iOS and Android, you can then virtually lay your planned terrace in front of your house. Simply put the **marker photo** from the reverse side of the brochure to the house wall and focus on it using the camera. Your virtual deck will now appear in the live screen of your tablet or Smartphone exactly at the marker point. From the sub-construction to the barefootboard, all details can be viewed from close proximity and from all directions. Although we have not yet invented a button that allows the virtual deck to be constructed immediately in your garden, we are working on it. Until then, your dealer is looking forward to receiving your request. Don't forget your planning number!

Natural colour diversity:

 NATURAL BROWN 	 NUT BROWN 	 BASALT GREY 	 LAVA BROWN 	 SLATE GREY 
 MUSKAT 	 TONKA 	 CARDAMOM 	 NIGELLA 	

Colour diversity and colour fixing

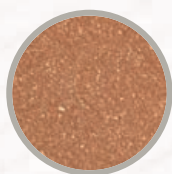

The diverse colour range of the megawood® barefootboard is based upon natural colour tones and consequently fits in harmoniously with the individual conditions of your garden. Look forward to a deck that will become more characteristic over time. Up to 75% of the megawood® barefootboard is made up of natural fibres. The colour effect of the product will continue to change and will obtain its final, natural and permanent colour after a few months depending upon exposure to direct sunlight.

SIGNUM – Guaranteed to be unique

The megawood® **SIGNUM barefootboards** are "**signed by nature**". In addition to the textured surface, each barefootboard boasts a unique refined grain. But that's not enough. We also apply a polish to the surface as an initial protection for transport, laying and the first few weeks of use. This polish wears away over time and the floorboard develops its own natural patina through the impacts of weathering. This creates a refined and premium product: The grain and refinement ensure that the SIGNUM is a robust beauty and that each deck is an eyecatcher! The **narrower gap** ensures a seamless deck appearance.

FIX STEP System – our flexible sub-construction

With the megawood® FIX STEP System, we offer you a continuous and sophisticated system from the clickable construction beams to the locking clamp. This system is characterised by **simple handling** and **fast laying**. Time-consuming preparation work tasks such as predrilling in concrete are now a thing of the past. Your megawood® construction plan will tell you just how this can be done.

With the megawood® FIX STEP System, you have chosen the easiest way to lay your deck, irrespective of whether you want an open or closed gap. Thanks to its lightness, the FIX STEP is also suitable for a floating laying style on roof terraces. And with the **variable height adjustment**, even existing, or uneven paved area are perfectly built over in the shortest of times.
